

Security Certificate Error – Instructions for Chrome

The library is experiencing an issue related to security certificates and access to our databases through our proxy server. We are working hard to resolve this, but in the meantime there is a workaround you can use to access the databases.

In Chrome: when trying to access the databases you might see a warning message that looks something like this:

You might see a couple of possible URLs in the error message:

- login.manowar.tamucc.edu or
- a database site like search.proquest.com.manowar.tamucc.edu

If the URL you see looks like one of those, then it is safe to continue and follow these steps:

1. Click advanced (at the bottom left of the screen).
2. Click a link to proceed to the website.
3. At this point, you may land on a page requesting you to log in with administrative access. Use your back button to return to the previous screen and click to proceed again. The second time, it will bypass the error message and connect you to the database.

We apologize for the inconvenience this error is causing you and hope to have it fixed very soon. If you follow these instructions and you still have difficulty accessing the databases, please contact [the Ask Us Desk](#).

Note: We are recommending this workaround as a last resort and because we are confident, based on our knowledge of the problem, that it is a safe alternative while we fix this issue. **Normally it is best to follow the web browser's recommendations when accessing websites.**
